

Passenger information about prohibited items on board

Dear Passenger,

Electra Airways would like to inform you, for your own safety, about the items that are safe to pack in your hand and hold baggage so that you can pass through the security screening check points at any Airport without an issue.

How to pack correctly

- In your hand baggage you may only carry liquids in containers that hold a maximum of 100 ml each and make no more than 1 L in total.
- Pack these containers into a re-sealable 1-liter plastic bag.
- Pack spare batteries and power banks (charging devices with a battery) in your hand baggage only. Protect batteries individually against short circuits.
- Containers with more than 100 ml of liquids, as well as knives and scissors with blades over 6 cm in length, are only permitted in checked baggage.
- If you are only travelling with hand baggage, you may not take these items with you on your journey.
- Liquid medication, baby food and special foods required during the flight can be transported in containers of more than 100 ml in your hand baggage (following a check).
- Electronic cigarettes, lighters and matches may not be placed in your baggage. You may however carry a lighter or box of matches on you personally.
- Portable oxygen concentrators for medical use need to be approved by the airline and may be carried in hand baggage only.

Passing Through the Security Check Quickly

Have the following items ready to place separately into the baggage trays and follow the instructions of the security staff:

- Empty your pockets and put your purses and wallets, coins, mobile telephone and keys in the trays for X-Ray screening.
- Take your belt, jacket, coat, blazer, etc. off in advance.
- Display the 1-litre plastic bag containing your liquid items of up to 100 ml.
- Show liquid medication, baby food and special food item(s) of over 100 ml
- Expose tax & duty free items (with purchase receipt in a sealed bag)
- Remove your portable computer, laptop, tablet and camera from your bag.

Prohibited items

Explosive, flammable, toxic and corrosive substances, such as:

- Electro shock weapons, disabling devices (pepper spray)
- Torch/Blue flame lighters and strike-anywhere matches
- Liquid oxygen systems
- Sparklers, Fireworks
- Paints/acids
- Gases/Gas cartridges/Pressure containers/
- Damaged batteries and equipment

Spare batteries and power banks

You may not take any spare batteries or power banks (charging device with battery) in your checked baggage. You may take max. two spare batteries with rating of 100 Wh up to 160 Wh in your hand baggage. Batteries must be individually protected from damage and short circuit.

Batteries installed in a device (Li-Ion - up to 100 Wh, Li-metal – up to 2g Li content) may be carried in either your hand baggage or checked baggage. Batteries with power capacity of over 160 Wh are prohibited.

Self-stabilizing, electric means of transport (hover boards)

Lithium battery-powered vehicles **are prohibited** in both hand baggage and checked baggage. This ban does not apply to wheelchairs or other mobility aids. Please contact us before you travel.

Diving equipment

As they generate heat, diving lamps cannot be placed in hold baggage. They may be transported in your hand baggage provided that the power supply has been disconnected. Please also note that scuba tanks must be completely empty with valve open or removed.

If you are in any doubt about an item, please bring it to the attention of either the airline or the security screener.
